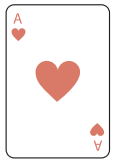
Learn how great games work, then design, build, and playtest a game of your own.

Explore the building blocks of board games — from chance and strategy to movement and resources. Each week we'll examine a different game mechanic, play example games, and apply the ideas to create your own game. By the end of the session, you'll have a working prototype, a rule sheet, and the experience to keep designing at home.

Eight Rotating Themes and Design Steps

Dice and spinners
Explore rolling, chance, and roll-and move games.



Cards
Explore drawing, holding a hand, matching, and set collection.

Board movement
Explore paths, spaces, shortcuts, and traps.

Tiles
Explore placing tiles to build a shared map.

Tokens and resources
Explore collecting, trading, and spending pieces.

Cooperative vs. competitive
Explore winning together against the game or winning alone.

Design studio
Combine mechanics and write a rule sheet.

Playtest day
Play each other's games & give feedback.

Optional design journal
Bring a notebook to sketch ideas, take notes, and track your progress.

Materials provided
All game supplies and prototyping materials are included.
